

# Technical Due Diligence Report

## ***Sample structure – placeholder***

This is a placeholder file. It stands in for a redacted sample diligence report while the real one is produced from an anonymized composite engagement. Nothing on this page describes an actual client, deal, or codebase.

## **What the real report will contain**

Executive summary and bottom-line recommendation

Risk register, scored by severity and estimated remediation cost

Architecture and scalability assessment

Code quality and maintainability review

Team and key-person risk assessment

Security and compliance posture (SOC 2 / regulatory exposure)

Infrastructure, cost, and vendor lock-in review

Roadmap credibility and time-to-launch estimate

Effort and cost model, priced in engineer-weeks and dollar ranges

First-90-days plan

Mark: replace public/sample-diligence-report.pdf with the real redacted sample once it's produced. The download gate on /due-diligence links directly to this file path, so swapping the file is the only change needed.
